

## **On-Farm PEDv Bio Security Protocol**

1. For your known hog and dairy facilities, only inspect one location a day. Do this farm as the first farm of the day, and have a washed and clean vehicle going in.
  - a. The vehicle wash needs to include an underbody wash.
  - b. Vacuum out the passenger compartment of the vehicle to remove all loose debris.
  - c. Spray the floorboard area and pedals with Tek-Trol.
2. Upon entering the farm, park in a clean area.
3. Have disposable boots within arms reach from inside the vehicle. Before exiting the vehicle (don't let your unprotected footwear touch the ground), put on the disposable boots.
  - a. If unable to put on disposable boots without exiting the vehicle, put a disposable floor mat on the ground and step onto the floor mat without letting your footwear touch the ground.
  - b. Once outside the vehicle, put on disposable boots while standing on the disposable floor mat. (put something on the mat to keep it from blowing away)
4. Complete your inspection of the farm. Ask the producer or someone from the farm, if available, to accompany you to your vehicle.
5. Upon returning to the vehicle, remove your disposable boots by pulling them off inside out, without letting your unprotected footwear touch the ground.
  - a. Use the original disposable floor mat if it hasn't been contaminated. Use a new disposable floor mat on top of the old one, if necessary.
6. Give your used footwear to the producer and have them dispose of the boots and the floor mats.
  - a. If the producer isn't available, place the used boots and floor mats in a garbage bag, tie the bag closed and take with you for disposal off site.
7. If you have contacted the ground at any point with unprotected footwear, you will need to do the following:
  - a. Mix-up a solution of Virkon S to use as a footwear sanitizer. Once mixed, the solution is effective for 7 days.
  - b. Use the disposable floor mats to stand on once footwear is sanitized, before entering the vehicle.
8. If you must inspect another hog and dairy facility in the same day, return to step 1.
